

DISCRETE MATHEMATICS

VOLUME 142, NUMBERS 1–3, 15 JULY 1995

CONTENTS

<i>A. Ainouche</i> A common generalization of Chvátal–Erdős' and Fraisse's sufficient conditions for hamiltonian graphs	1
<i>D. Archdeacon and D.A. Grable</i> The genus of a random graph	21
<i>R.J. Chapman</i> Shrinking integer lattices	39
<i>B. Gao, D.-Z. Du and R.L. Graham</i> A tight lower bound for the Steiner ratio in Minkowski planes	49
<i>F. Granot and M. Penn</i> On the integral 4-packing of T -cuts	65
<i>M. Gutierrez and L. Oubiña</i> Minimum proper interval graphs	77
<i>P. Haukkanen</i> An abstract Möbius inversion formula with number-theoretic applications	87
<i>O. Heden</i> Maximal partial spreads and the modular n -queen problem II	97
<i>M.A. Henning</i> Irredundance perfect graphs	107
<i>C.T. Hoàng</i> Hamiltonian degree conditions for tough graphs	121
<i>M. Katchalski, W. McCuaig and S. Seager</i> Ordered colourings	141
<i>G.T. Kennedy and V. Pless</i> A coding theoretic approach to extending designs	155
<i>J. Körner</i> Intersection number and capacities of graphs	169
<i>X. Lu</i> A Hamiltonian game on $K_{n,n}$	185
<i>X. Qing</i> Reversible $(m, n, k, \lambda_1, \lambda_2)$ -abelian divisible difference sets with $k - \lambda_1$ nonsquare	193
<i>L. Smithline</i> Bandwidth of the complete k -ary tree	203
<i>R. Sprugnoli</i> Riordan arrays and the Abel–Gould identity	213
<i>S. Stahl</i> Bounds for the average genus of the vertex-amalgamation of graphs	235

<i>A.H. Zemanian</i> Connectedness in transfinite graphs and the existence and uniqueness of node voltages	247
 <i>Notes</i>	
<i>F.W. Barnes</i> Best packing of rods into boxes	271
<i>G.-G. Gao and G. Hahn</i> Minimal graphs that fold onto K_n	277
<i>M. Krivelevich</i> On a conjecture of Tuza about packing and covering of triangles	281
<i>C.D. Maranas, C.A. Floudas and P.M. Pardalos</i> New results in the packing of equal circles in a square	287
<i>H. Mizuno and I. Sato</i> Characteristic polynomials of some graph coverings	295
 Author index to volume 142	 299
